TYPES OF ANEMIA

- Iron deficiency anemia
 - ♣ excessive loss of iron .
 - ♣ Women are at risk. ---- For menstrual blood and growing fetus.
- Megaloblastic anemia
 - ♣ Less intake of vitamin B 12 and folic acid.
 - ♣ Red bone marrow produces abnormal RBC.
 e.g cancer drugs
- Pernicious anemia
 - ♣ Inability of stomach to absorb vitamin B 12 in small intestine.

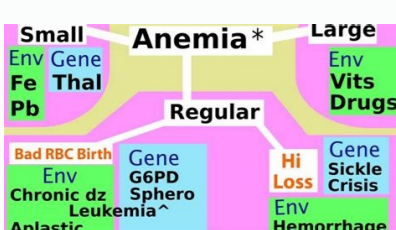

Table-1: MDS classification according to the WHO (2008)

MDS Subclass	Peripherally Blood	Bone Marrow
Refractory cytopenia with unilineage dysplasia (RCUD) Refractory anemia (RA) Refractory neutropenia (NT) Refractory thrombocytopenia (TR)	Anemia <1% blasts	Uni-linear erythroid dysplasia (in ≥ 10% of cells) <5% blasts
	Neutropenia <1% blasts	Uni-linear granulocytic dysplasia. <5% blasts.
	Thrombocytopenia <1% blasts	Megakaryocytic dysplasia <5% blasts
Refractory anemia with ringed sideroblasts (ARSA)	Anemia; <1% blasts	Erythroid dysplasia (of erythrocytes); <5% blasts, ≥15% ring sideroblasts
Refractory cytopenia with multilineage dysplasia (CRDM)	Cytopenia; <1% blasts; without Auer sticks	Multiline dysplasia ± ring sideroblasts <5% blasts, without Auer sticks
Refractory anemia with excess blasts type-1 AREB-1	Cytopenia; <5% blasts; Without Auer sticks.	Mono- or multi-lineage dysplasia 5-9% blasts; without sticks of Auer
Refractory anemia with excess blasts type 2 AREB-2	Cytopenia (s) 5% -19% blasts ± Auer canes	Uni or multilineage dysplasia 10% -19% blasts ± Auer sticks
MDS associated with isolated deletion 5q Del (5q)	Anemia; <1% blasts; Normal or augmented platelets	Isolated deletion 5q, Anemia, hypolobated megakaryocytes, <5% blasts
Unclassified MDS-U	Cytopenias; ≤ 1% blasts	It does not clearly fit other categories of dysplasia <5% blasts; if there isn't dysplasia or karyotype associated with MDS

Microcytic	Causes	Symptoms & Signs	Hgb	Hct	MCV
Iron Deficiency	Menstrual loss, bleeding, surgery, acute, chronic, pregnancy	Pale, fatigue, loss of exercise tolerance	Low	Low	Low
Aplastic Anemia	Underlying disease, alcohol, radiation, chemotherapy, drugs	Fever, anorexia, weight loss, infection, easy bruising	Low	Low	Low
Lead Poisoning	Exposure to lead (paint, solder, pipes)	Abdominal pain, weight loss, irritability, weakness	Low	Low	Low
Macrocytic	Alcohol, liver disease, folate deficiency, B12 deficiency, hypothyroidism, pregnancy	Neurologic deficits, low hemoglobin, low platelets	Low	Low	High
B12 Deficiency	Alcoholism, pernicious anemia, malabsorption, vegetarian diet, pregnancy	Same as B12, plus neurologic symptoms	Low	Low	High
Folate Deficiency	Alcoholism, malabsorption, pregnancy	Same as B12, neurologic symptoms	Low	Low	High

Anemia classification ppt. Anemia classification according to who. Anemia classification chart. Anemia classification severity. Anemia classification flow chart. Anemia classification based on etiology. Anemia classification in pregnancy. Anemia classification robbins.

It is differentiated between hemochromatosis and hemosiderose. This will give an idea about the effectiveness of treating iron deficient anemia. Reticulture counting. The reticulate count was normal from 0.5 to 1.5%. Pregnancy due to the increase in plasma volume. Toxicity due to drugs. Acquired hemolytic anemia may be the protesting surgery of the heart. There is a pallor in the face and best judged by the dowant. RBC's survival time is slightly smaller. Infiltration by leukemia and myeloma. Anemia due to blood loss in bleeding. About the effort, there is a disappetion and throb. If normal, inform electrophoresis. The patient may have the exercise after the exercise. Normocyan and differential diagnosis of anemia and hypochromic anemia: This is the most common type of anemia, and iron deficion is the most common cause. MCV =
